

Field tags for PDF documents

Example file for the EsignCenter API. Put tags like these into your own PDF and the fields are placed where the tags are.

Field tag attributes (attribute=value;)

name: field name

role: name of the signer role (optional)

type: text, signature, initials, date, image, file, select, checkbox (optional, default: text)

options: comma separated 'select' type options

required: set false to make the field optional (optional, default: true)

default: field default value

readonly: set true to make the field readonly (optional, default: false)

Tag examples

Simple text field: {{Text Field}}

Text fields for two signing parties: {{Field1;role=First Party}} {{Field2;role=Second Party}}

Date field: {{DOB;type=date}}

Signature: {{Signature}} or {{Sign here;type=signature}}

Readonly with a default value: {{Name;readonly=true;default=Bob}}

With a width, a height and every other attribute: {{Test;readonly=false;required=false;type=image;role=Second Party;width=200;height=30}}
